Ahmedabad-based researcher develops drug formulation to tackle anti-aging

New Delhi, Feb 3 (UNI) Scientific researcher Dr Sanjay Agrawal, who holds over 42 patents for unique drug formulations, has developed a unique anti-aging formulation, which besides addressing aging at a cellular level, has the potential to significantly improve skin health, boost energy levels and enhance overall vitality. The Ahmedabad-based veteran researcher has confirmed that the game-changing formulation is finalised and he is already awaiting a patent for the same. A renowned pharmaceutical consultant and founder of Leading Pharma Consultant and Inventor, Dr Agrawal said, "Anti-aging medicine, a revolutionary scientific discipline, is redefining how we approach the aging process. By focusing on advanced technologies, early detection, prevention and reversal of age-related dysfunctions, anti-aging medicine aims to enhance physical, functional, and aesthetic well-being while extending lifespans. Our new formulation will further boost the prospects of the domain, as with targeted benefits and innovative ingredients, the formulation is poised to make a lasting impact in the fight against age-related decline." The Scientific Advisor of US-based ALKOMEX GBN PHARMA GROUP said that aging is a natural, irreversible process that begins in early adulthood, leading to gradual declines in the functionality of body cells, tissues, and organs. "While chronological aging is inevitable, biological and psychological aging differ significantly from one individual to another, influenced by intrinsic and extrinsic factors such as hormonal changes, stress and lifestyle," he added. The American Academy of Anti-Aging Medicine (A4M) emphasized the importance of lifestyle changes, including staying active, eating nutritious foods, managing stress and avoiding harmful habits, as cornerstones of healthy aging. Together, these innovations and habits hold the potential to reduce age-related diseases, allowing individuals to live healthier, longer lives.
